

Cautious Portfolio

30th April 2018

INTELLIGENT INTUITIVE INVESTING

Investment Objective

The Cautious Portfolio targets a return in excess of inflation by diversifying across a broad range of assets with differing return and volatility profiles.

The portfolio targets a return 3-4% above inflation while minimising the possibility of the investment falling in value. The Cautious portfolio investment

value may fluctuate in the short term, but we would not expect significant fluctuations in value over a sustained period.

Market Comment

Volatility continued into April and large price swings were seen in many asset classes. Overall the month ended on a positive note with UK Equities returning strong gains. Economic fundamentals in the UK were not strong but equities were boosted by currency weakness after a fall in UK Interest Rate expectations. In

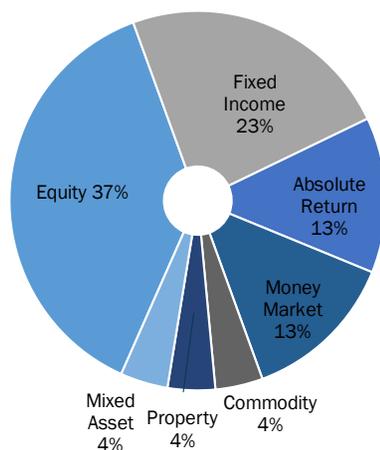

sterling terms, nearly all regions saw positive returns for investors with Europe and India adding the most value. For fixed income the US 10 Year Yield rising above 3% caused volatility to rise in the main equity S&P500 index but compared to 2013, when rates last breached 3%, markets remained relatively calm. Overall the

portfolio added value after we increased risk at the start of the month but we expect volatility to continue and will be looking to add more risk, opportunistically, in the coming months.

Notes:

- The performance data shown is indicative only. Rivers Capital Management attempts to replicate accurately the performance of the underlying portfolio using Financial Express data but performances will likely differ from individual accounts due to inflows and timing issues. The performance is net of a 0.25%+VAT Rivers Capital Management fee.
- The 'Actual' data includes the highest ever OCF and loss and the annualised total return and volatility since inception on June 30, 2016
- The fees quoted are based on the current portfolio weightings using the latest available OCF data of each fund. The yield is not guaranteed.
- The current loss is calculated as the replicated loss from the previous month end highest portfolio value. Intra month or daily data may exceed this.

Rivers Asset Classification System:

"Anchors": investments selected for low market correlation, low risk and capital preservation core characteristics. Significant allocation in low risk portfolios.

"Enhancers": selected to increase portfolio long term return but exposed to equity risk. Allocation likely to increase with risk tolerance as returns become more volatile.

"Diversifiers": selected for low correlation to traditional market equity and fixed income risk.

Diversifiers are essential for efficiency in all but the lowest and highest risk portfolios.
