

Adventurous Portfolio

30th Sep 2018

INTELLIGENT INTUITIVE INVESTING

Investment Objective

The Adventurous Portfolio aims to achieve its objective by diversifying across a broad range of assets with differing return and volatility profiles.

The Adventurous portfolio seeks capital growth as a primary objective and aims to achieve conservative equity like returns at volatility levels about two thirds as

high as equity. Sharp fluctuations in the value of the portfolio can be expected in order to achieve greater potential returns over the longer term.

Market Comment

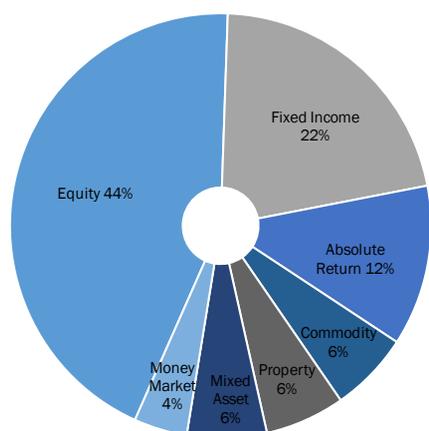

September was a challenging month, with a wide variation in performance across a range of asset classes. Most developed market equities were slightly positive but emerging markets, in particular India, saw continued declines. Indian equities have so far avoided any serious repercussions from the global trade war, but

liquidity concerns there escalated during the month which affected returns. Interest rate increases somewhat dented government bond valuations but the effect of a falling gold price, which hit the gold miners diversifier allocation, had a more significant impact. Despite a challenging month, after rebalancing

on September 18th we believe the portfolios are now well positioned should volatility rise in the coming months.

Key Objectives	Target	Actual ²
Annualised Return ²	6.0-8.5%	10.0%
Portfolio Volatility ²	13.00%	5.1%
Maximum Loss ²	15.00%	2.7%

Notes:

- The performance data shown is indicative only. Rivers Capital Management attempts to replicate accurately the performance of the underlying portfolio using Financial Express data but performances will likely differ from individual accounts due to inflows and timing issues. The performance is net of a 0.25%+VAT Rivers Capital Management fee.
- The 'Actual' data includes the highest ever OCF and loss and the annualised total return and volatility since inception on June 30, 2016
- The fees quoted are based on the current portfolio weightings using the latest available OCF data of each fund. The yield is not guaranteed.
- The current loss is calculated as the replicated loss from the previous month end highest portfolio value. Intra month or daily data may exceed this.

Rivers Asset Classification System:

"Anchors": investments selected for low market correlation, low risk and capital preservation core characteristics. Significant allocation in low risk portfolios.

"Enhancers": selected to increase portfolio long term return but exposed to equity risk. Allocation likely to increase with risk tolerance as returns become more volatile.

"Diversifiers": selected for low correlation to traditional market equity and fixed income risk.

Diversifiers are essential for efficiency in all but the lowest and highest risk portfolios.
