

Balanced Portfolio

31st December 2018

INTELLIGENT INTUITIVE INVESTING

Investment Objective

The Balanced Portfolio aims to achieve its objective by diversifying across a broad range of assets with differing return and volatility profiles. The portfolio targets long

term returns of 4-6% above cash at volatility levels considerably below those expected in equity. The typical investor seeks capital growth from their investment and is able

to accept a moderate level of risk for the potential of higher returns. They recognise that their capital is at risk and that its value may fluctuate.

Market Comment

December was particularly challenging for investors as equity indices, especially in the US, fell sharply. The loss was largely in response to the Federal Reserve decision to continue with its policy of monetary tightening, despite falling investor confidence in recent months. Gold and other Diversifier assets performed positively

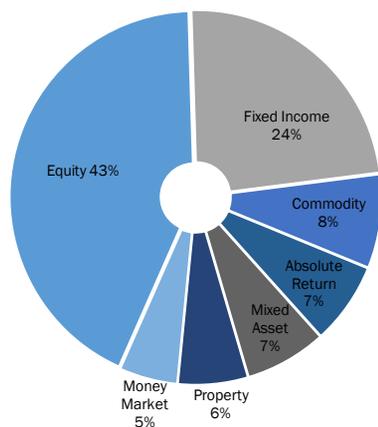

while Anchor assets provided some protection as bond yields fell. Overall, though, the 7% loss across global equities led to an overall loss for the month. The portfolio has maintained an underweight risk allocation which reduced, but did not eliminate, losses during the very difficult final quarter. While we expect the changing

sentiment and slowing global growth to continue to impact markets we believe the opportunity to allocate risk at more attractive valuations in the coming weeks is good.

Key Objectives	Target	Actual ²	Performance (%) ¹	1 mth	3 mth	6 mth	YTD	1yr	S/I

Notes:

- The performance data shown is indicative only. Rivers Capital Management attempts to replicate accurately the performance of the underlying portfolio using Financial Express data but performances will likely differ from individual accounts due to inflows and timing issues. The performance is net of a 0.25%+VAT Rivers Capital Management fee.
- The 'Actual' data includes the highest ever OCF and loss and the annualised total return and volatility since inception on June 30, 2016
- The fees quoted are based on the current portfolio weightings using the latest available OCF data of each fund. The yield is not guaranteed.
- The current loss is calculated as the replicated loss from the previous month end highest portfolio value. Intra month or daily data may exceed this.

Rivers Asset Classification System:

"Anchors": investments selected for low market correlation, low risk and capital preservation core characteristics. Significant allocation in low risk portfolios.

"Enhancers": selected to increase portfolio long term return but exposed to equity risk. Allocation likely to increase with risk tolerance as returns become more volatile.

"Diversifiers": selected for low correlation to traditional market equity and fixed income risk.

Diversifiers are essential for efficiency in all but the lowest and highest risk portfolios.
