

Balanced Portfolio

31st May 2023

INTELLIGENT INTUITIVE INVESTING

Investment Objective

The Rivers Balanced Portfolio targets moderate long term returns above inflation, and after fees, at volatility levels considerably below those expected in equities. The portfolio aims to achieve its objective by maximising diversification across a range of assets. The portfolio will be moderately exposed to global equity market cycles. The typical investor seeks capital growth from their investment and can accept a moderate level of risk for the potential of higher returns.

Market Comment

May was difficult for most asset classes and the portfolio overall. Fixed income values fell as interest rates rose while most equity indices fell. Global equities were positive overall but were driven by gains within only a few US technology stocks. With valuations in the tech sector already high, the allocation within the portfolio is low. This has adversely affected performance but is unlikely to be sustained. Within Anchors, the money market allocation reduced the impact of rising bond yields and offset some absolute return losses. Within Enhancers the European, UK and Emerging Markets lost value. US equity gains were led by technology, to which the portfolio is underweight. Within Diversifiers the energy, insurance and real asset allocations struggled but should provide protection against sustained inflation which remains a primary risk.

Model Characteristics	Target	Current
Annualised Return ¹	5.2-6.7%	5.6%
Portfolio Volatility ²	<9.0%	7.1%
Maximum Loss ³	<10.0%	-10.4%

2023	2.0%	-	-	-	2.0%

Rivers Asset Classification System:

"Anchors": investments selected for low market correlation, low risk and capital preservation core characteristics. Significant allocation in low risk portfolios.

"Enhancers": selected to increase portfolio long term return but exposed to equity risk. Allocation likely to increase with risk tolerance as returns become more volatile.

"Diversifiers": selected for low correlation to traditional market equity and fixed income risk. Diversifiers are essential for efficiency in all but the lowest and highest risk portfolios.

Notes:

- The performance data shown is indicative only. Rivers Capital Management attempts to replicate accurately the performance of the underlying portfolio using composite fund data but performances will likely differ from individual accounts due to inflows and timing issues. The performance is net of a 0.25% Rivers Capital Management fee and annualised since inception (June 30th 2016).
- Volatility is calculated as the annualised average weekly standard deviation of return since inception (June 30th 2016).
- The maximum loss is calculated as the total loss from the highest previous month end portfolio value. Intra month or daily data may exceed this.
- The ongoing charge is based on the current portfolio weightings using the latest available OCF data of each fund.
- The yield is the average yield as published by each fund and not guaranteed.
- Rivers investment committee determines a Passive allocation target (20-60%) dependant on the perceived market opportunity.
- Relative risk level determined between 1 and 7 within the tactical constraints of all models with a level 4 considered tactically neutral.
