

Cautious Portfolio

30th September 2023

Investment Objective

The Rivers Cautious Portfolio targets modest long term returns above inflation, and after fees, at controlled volatility levels. The portfolio aims to achieve its objective by diversifying across a broad range of assets with moderate return and lower volatility profiles. The portfolio may be somewhat exposed to global equity and interest rate market cycles. The typical investor seeks modest capital growth but must accept that the portfolio's investment value may fluctuate in the short term.

Market Comment

The portfolio value increased slightly during September and finished with positive performance over the third quarter and year to date. With bond yields rising to levels not seen since before the financial crisis and widespread global equity losses this was a positive outcome. Positive returns for the month came from money markets, selective equity holdings and some diversifiers. The short duration position within Anchors provided protection from increases in benchmark interest rates. Within Enhancers the UK provided positive returns as value out performed growth by the biggest margin so far this year. The message from the Bank of England, and other central banks, that interest rates may go higher and will be held high for at least a year saw investor sentiment fall sharply. Within Diversifiers precious metals and real assets struggled but commodities and insurance added value. We continue to expect markets to be challenged over the coming month but expect the opportunity to reallocate risk at more attractive valuations before year end.

| Performance (%) ¹ | 1m | 3m | YTD | 1yr | 3yr | 5yr |

| 2023 | 1.5% | 0.1% | 2.1% | - | 3.8% |

Rivers Asset Classification System:

"Anchors": investments selected for low market correlation, low risk and capital preservation core characteristics. Significant allocation in low risk portfolios.

"Enhancers": selected to increase portfolio long term return but exposed to equity risk. Allocation likely to increase with risk tolerance as returns become more volatile.

"Diversifiers": selected for low correlation to traditional market equity and fixed income risk. Diversifiers are essential for efficiency in all but the lowest and highest risk portfolios.

Notes:

- The performance data shown is indicative only. Rivers Capital Management attempts to replicate accurately the performance of the underlying portfolio using composite fund data but performances will likely differ from individual accounts due to inflows and timing issues. The performance is net of a 0.25% Rivers Capital Management fee and annualised since inception (June 30th 2016).
- Volatility is calculated as the annualised average weekly standard deviation of return since inception (June 30th 2016).
- The maximum loss is calculated as the total loss from the highest previous month end portfolio value. Intra month or daily data may exceed this.
- The ongoing charge is based on the current portfolio weightings using the latest available OCF data of each fund.
- The yield is the average yield as published by each fund and not guaranteed.
- Rivers investment committee determines a Passive allocation target (20-60%) dependant on the perceived market opportunity.
- Relative risk level determined between 1 and 7 within the tactical constraints of all models with a level 4 considered tactically neutral.
