

Rivers ESG Balanced Portfolio

31st July 2025

Investment Objective

The Rivers ESG Balanced Portfolio targets long term capital growth in real terms and after fees. The portfolio invests only in solutions which pass strict criteria of Environmental, Social and Governance (ESG) requirements. The portfolio will be moderately exposed to global equity market cycles. The typical investor seeks capital growth from their investment and is able to accept a moderate level of risk for the potential of higher returns.

Market Comment

Markets continued to advance in July, with many reaching all-time highs. Portfolio returns have been strong since tactically increasing risk exposure on April 8th. In July, the largest contributor was the Enhancer (equity) allocation, with all positions adding value, except Liontrust UK Ethical. Anchor allocations also delivered positive returns across the board. Diversifiers were more mixed: Sustainable Energy and Infrastructure performed well, while Insurance struggled and was the weakest performer. At month-end, we tactically reduced risk exposure in a rebalance that shifted allocation from Enhancer to Anchors and Diversifiers. This adjustment aims to lock in gains and reduce exposure ahead of an expected more volatile period.

Rivers Asset Classification System:

"Anchors": investments selected for low market correlation, low risk and capital preservation core characteristics. Significant allocation in low risk portfolios.

"Enhancers": selected to increase portfolio long term return but exposed to equity risk. Allocation likely to increase with risk tolerance as returns become more volatile.

"Diversifiers": selected for low correlation to traditional market equity and fixed income risk. Diversifiers are essential for efficiency in all but the lowest and highest risk portfolios.

Notes:

- The performance data shown is indicative only. Rivers Capital Management attempts to replicate accurately the performance of the underlying portfolio using composite fund data but performances will likely differ from individual accounts due to inflows and timing issues. The performance is net of a 0.25% Rivers Capital Management fee and annualised since inception (31/03/2017).
- Volatility is calculated as the annualised average weekly standard deviation of return since inception (31/03/2017).
- The maximum loss is calculated as the total loss from the highest previous month end portfolio value. Intra month or daily data may exceed this.
- The ongoing charge is based on the current portfolio weightings using the latest available OCF data of each fund.
- The yield is the average yield as published by each fund and not guaranteed.
- Rivers investment committee determines a Passive allocation target (20-60%) dependant on the perceived market opportunity.
- Relative risk level determined between 1 and 7 within the tactical constraints of all models with a level 4 considered tactically neutral.
