

Rivers Adventurous Risk Portfolio

31st October 2025

Investment Objective

The Rivers Adventurous Portfolio seeks capital growth, after fees, as its primary objective whilst maintaining a moderate constraint over overall short-term volatility. The portfolio aims to achieve its objective by diversifying across a broad range of global assets with differing return and volatility profiles. The portfolio will be exposed to global equity market cycles. Fluctuations in the value of the portfolio should be expected in order to achieve greater potential returns over the longer term.

Market Comment

Investment markets extended their rally into October, pushing many indices to new all-time highs. Although the market advance narrowed from September's broad gains, nearly all portfolio positions contributed positively. The Enhancer allocation was the largest contributor, led by Emerging Markets and strong performances from Global and European equities. All Diversifier allocations added value, with strong gains from Energy and Infrastructure ensuring a positive year-to-date rally for the segment; for once, Gold Miners were the relative laggard. The Anchor allocation was also positive, with all holdings ending the month higher. While our decision to reduce tactical risk exposure at the start of the month may have marginally reduced overall gains, the portfolio is well positioned to protect value amid signs of elevated, and potentially excessive, investor confidence.

Rivers Asset Classification System:

"Anchors": investments selected for low market correlation, low risk and capital preservation core characteristics. Significant allocation in low risk portfolios.

"Enhancers": selected to increase portfolio long term return but exposed to equity risk. Allocation likely to increase with risk tolerance as returns become more volatile.

"Diversifiers": selected for low correlation to traditional market equity and fixed income risk. Diversifiers are essential for efficiency in all but the lowest and highest risk portfolios.

Notes:

- The performance data shown is indicative only. Rivers Capital Management attempts to replicate accurately the performance of the underlying portfolio using composite fund data but performances will likely differ from individual accounts due to inflows and timing issues. The performance is net of a 0.25% Rivers Capital Management fee and annualised since inception (30/06/2016).
- Volatility is calculated as the annualised average weekly standard deviation of return since inception (30/06/2016).
- The maximum loss is calculated as the total loss from the highest previous month end portfolio value. Intra month or daily data may exceed this.
- The ongoing charge is based on the current portfolio weightings using the latest available OCF data of each fund.
- The yield is the average yield as published by each fund and not guaranteed.
- Rivers investment committee determines a Passive allocation target (20-60%) dependant on the perceived market opportunity.
- Relative risk level determined between 1 and 7 within the tactical constraints of all models with a level 4 considered tactically neutral.
