

Rivers Cautious Income Portfolio

30th November 2025

Investment Objective

The Rivers Cautious Income Portfolio targets income of 3.5% by diversifying across a broad range of assets with differing return and volatility profiles. The portfolio is expected to maintain real value, net of income, after inflation while minimising the possibility of the investment falling in value. The portfolio may be somewhat exposed to global equity and interest rate market cycles. The portfolio's investment value will fluctuate in the short term, but we would not expect significant falls in value over a sustained period.

Market Comment

Market volatility increased in November as concerns over slowing growth and elevated equity valuations affected investor confidence. Returns were mixed, but the portfolio finished the month higher overall, adding to its strong year-to-date total return. The Anchor allocation was positive as interest rates fell and the absolute return holdings added value. Performance for Enhancers was mixed, with value equities outperforming growth. EM and high-multiple equities gave back some of their recent gains. Within diversifiers gains from Real Assets were partially offset by losses from the macro allocation. As we look toward the year-end, the portfolio remains tactically underweight risk. This positioning reflects our preference for value equities and a continued focus on diversification. We believe this stance will help protect capital while allowing risk to be increased at more attractive valuations.

Performance (%) ¹	1m	3m	YTD	1yr	3yr	5yr
Rivers Cautious Inc	0.54	3.21	9.80	8.85	19.5	15.5
IA Mixed 0-35% Eqty	-0.05	3.14	7.54	6.53	17.8	10.6

2025	1.02%	3.28%	2.78%		9.8%

Rivers Asset Classification System:

"Anchors": investments selected for low market correlation, low risk and capital preservation core characteristics. Significant allocation in low risk portfolios.

"Enhancers": selected to increase portfolio long term return but exposed to equity risk. Allocation likely to increase with risk tolerance as returns become more volatile.

"Diversifiers": selected for low correlation to traditional market equity and fixed income risk. Diversifiers are essential for efficiency in all but the lowest and highest risk portfolios.

Notes:

- The performance data shown is indicative only. Rivers Capital Management attempts to replicate accurately the performance of the underlying portfolio using composite fund data but performances will likely differ from individual accounts due to inflows and timing issues. The performance is net of a 0.25% Rivers Capital Management fee and annualised since inception (30/06/2016).
- Volatility is calculated as the annualised average weekly standard deviation of return since inception (30/06/2016).
- The maximum loss is calculated as the total loss from the highest previous month end portfolio value. Intra month or daily data may exceed this.
- The ongoing charge is based on the current portfolio weightings using the latest available OCF data of each fund.
- The yield is the average yield as published by each fund and not guaranteed.
- Rivers investment committee determines a Passive allocation target (20-60%) dependant on the perceived market opportunity.
- Relative risk level determined between 1 and 7 within the tactical constraints of all models with a level 4 considered tactically neutral.
