

Rivers Adventurous Risk Portfolio

28th February 2026

Investment Objective

The Rivers Adventurous Portfolio seeks capital growth, after fees, as its primary objective whilst maintaining a moderate constraint over overall short-term volatility. The portfolio aims to achieve its objective by diversifying across a broad range of global assets with differing return and volatility profiles. The portfolio will be exposed to global equity market cycles. Fluctuations in the value of the portfolio should be expected in order to achieve greater potential returns over the longer term.

Market Comment

February saw further broad gains across the portfolio. Despite the tactical underweight, the strongest contribution came from Enhancers, led by Japanese, Global Income, and Emerging Market equity funds. The UK small cap allocation was the only holding to lose value during the month. Diversifiers once again performed well, with allocations to Infrastructure and Real Estate, each up around 10%, adding the most value. The Anchor allocation was also positive as UK benchmark interest rates fell. Following strong gains so far in 2026, the portfolio was rebalanced in the last week of February. This included fund changes for European and Japanese equity holdings and the introduction of Healthcare as a new Diversifier. Looking ahead, we are monitoring the situation in the Middle East but believe the current underweight tactical risk allocation remains appropriate.

Rivers Asset Classification System:

"Anchors": investments selected for low market correlation, low risk and capital preservation core characteristics. Significant allocation in low risk portfolios.

"Enhancers": selected to increase portfolio long term return but exposed to equity risk. Allocation likely to increase with risk tolerance as returns become more volatile.

"Diversifiers": selected for low correlation to traditional market equity and fixed income risk. Diversifiers are essential for efficiency in all but the lowest and highest risk portfolios.

Notes:

- The performance data shown is indicative only. Rivers Capital Management attempts to replicate accurately the performance of the underlying portfolio using composite fund data but performances will likely differ from individual accounts due to inflows and timing issues. The performance is net of a 0.25% Rivers Capital Management fee and annualised since inception (30/06/2016).
- Volatility is calculated as the annualised average weekly standard deviation of return since inception (30/06/2016).
- The maximum loss is calculated as the total loss from the highest previous month end portfolio value. Intra month or daily data may exceed this.
- The ongoing charge is based on the current portfolio weightings using the latest available OCF data of each fund.
- The yield is the average yield as published by each fund and not guaranteed.
- Rivers investment committee determines a Passive allocation target (20-60%) dependant on the perceived market opportunity.
- Relative risk level determined between 1 and 7 within the tactical constraints of all models with a level 4 considered tactically neutral.
