

Rivers Balanced Income Portfolio

30th April 2026

Investment Objective

The Rivers Balanced Income Portfolio targets an income of 4.0% by diversifying across a broad range of assets. The portfolio is expected to maintain real value, net of income, after inflation while minimising the possibility of the investment falling in value. The typical investor seeks consistent income from their investment but is able to accept a moderate level of risk for the potential of higher income. They recognise that their capital is at risk and that its value may fluctuate.

Market Comment

Despite no solid resolution to the conflict in Iran, investment assets performed well during April, reversing much of the losses seen in March. The best-performing allocations were Enhancers, led by strong returns from Emerging Markets. All equity regions were positive, with many indices returning to all-time highs. Performance across Diversifiers was also positive led by real estate and infrastructure. Within Anchors, rising gilt yields caused some losses, though these were offset by asset-backed debt, short duration and the absolute return fund. Looking forward, equity valuations in certain sectors, along with uncertainty over energy prices and debt, give us cause for concern. Our defensive allocation, with a value bias and broad diversification, remains appropriate.

Rivers Asset Classification System:

"Anchors": investments selected for low market correlation, low risk and capital preservation core characteristics. Significant allocation in low risk portfolios.

"Enhancers": selected to increase portfolio long term return but exposed to equity risk. Allocation likely to increase with risk tolerance as returns become more volatile.

"Diversifiers": selected for low correlation to traditional market equity and fixed income risk. Diversifiers are essential for efficiency in all but the lowest and highest risk portfolios.

Notes:

- The performance data shown is indicative only. Rivers Capital Management attempts to replicate accurately the performance of the underlying portfolio using composite fund data but performances will likely differ from individual accounts due to inflows and timing issues. The performance is net of a 0.25% Rivers Capital Management fee and annualised since inception (30/06/2016).
- Volatility is calculated as the annualised average weekly standard deviation of return since inception (30/06/2016).
- The maximum loss is calculated as the total loss from the highest previous month end portfolio value. Intra month or daily data may exceed this.
- The ongoing charge is based on the current portfolio weightings using the latest available OCF data of each fund.
- The yield is the average yield as published by each fund and not guaranteed.
- Rivers investment committee determines a Passive allocation target (20-60%) dependant on the perceived market opportunity.
- Relative risk level determined between 1 and 7 within the tactical constraints of all models with a level 4 considered tactically neutral.
