Rivers Adventurous Risk Portfolio

31st August 2026

Investment Objective

The Rivers Adventurous Portfolio seeks capital growth, after fees, as its primary objective whilst maintaining a moderate constraint over overall short-term volatility. The portfolio aims to achieve its objective by diversifying across a broad range of global assets with differing return and volatility profiles. The portfolio will be exposed to global equity market cycles. Fluctuations in the value of the portfolio should be expected in order to achieve greater potential returns over the longer term.

Market Comment

In August market returns were broadly positive but concern regarding rising sovereign debt and inflation continued to rise. Overall, the portfolio was positive for the month, with gains across all three asset types. The best-performing asset type was Diversifiers, with strong gains from Real Assets, supported by Healthcare, Thematic and Energy, and only Infrastructure detracting. Enhancers also added value as Emerging Market, Japanese, US and Global equities rose, more than offsetting a small loss in UK equities. Within Anchors, asset-backed debt and short duration bonds made modest gains while gilts were flat. Looking forward, elevated equity valuations, together with rising government debt and persistent inflation, give us cause for concern. The portfolio was rebalanced in August maintaining a diversified and value orientated allocation.

Performance (%)[1]	1m	3m	YTD	1yr	3yr	5yr	10yr
Rivers Adventurous	2.32	1.59	8.99	17.48	44.2	40.1	109.0

2025	-0.10%	5.94%	8.36%	4.12%	19.4%
2026	1.61%	5.18%			9.0%

Rivers Asset Classification System:

"**Anchors**": investments selected for low market correlation, low risk and capital preservation core characteristics. Significant allocation in low risk portfolios.

"**Enhancers**": selected to increase portfolio long term return but exposed to equity risk. Allocation likely to increase with risk tolerance as returns become more volatile.

"**Diversifiers**": selected for low correlation to traditional market equity and fixed income risk. Diversifiers are essential for efficiency in all but the lowest and highest risk portfolios.

Notes:

1. The performance data shown is indicative only. Rivers Capital Management attempts to replicate accurately the performance of the underlying portfolio using composite fund data but performances will likely differ from individual accounts due to inflows and timing issues. The performance is net of a 0.25% Rivers Capital Management fee and annualised since inception (30/06/2016).
2. Volatility is calculated as the annualised average weekly standard deviation of return since inception (30/06/2016).
3. The maximum loss is calculated as the total loss from the highest previous month end portfolio value. Intra month or daily data may exceed this.
4. The ongoing charge is based on the current portfolio weightings using the latest available OCF data of each fund.
5. The yield is the average yield as published by each fund and not guaranteed.
6. Rivers investment committee determines a Passive allocation target (20-60%) dependant on the perceived market opportunity.
7. Relative risk level determined between 1 and 7 within the tactical constraints of all models with a level 4 considered tactically neutral.
